

Barcode Singles 1D

Version 5.x

1D Barcode Font Kits - PC Format

Fonts

Barcode Singles uses fonts to allow barcode printing. (Graphics options available in Barcode Utility if required)

When Barcodes strings are needed in volume and are all variable, using barcode fonts is the best option and requires less storage and preparation in documents.

Barcode fonts in general do not have a 1 to 1 character relationship to the original data that you require to print.

It is the reason why you need the data encoded and tools to do the encoding.
We provide various tools to help this process.

Just applying a barcode font to a data string will NOT work, what you see may look like a barcode, but will NOT work and will NOT scan!

Fonts v Graphics

Fonts

Barcodes made from fonts give great flexibility to produce unlimited variable barcodes, however the barcode data "Strings" need some sort of encoding, sometimes simple, sometimes complex.

Advantages of Barcode Fonts

- Fonts are Fully Scalable, with Human readable text options
- Create as many variable as you require
- Easy to insert where required
- Low storage (not graphic)

Graphics

A Graphics option is provided in the Windows Utility, suitable when requiring a smaller number of barcode images, or infrequent usage.

The fonts are made in PC Truetype format for better all-round flexibility.

They are installed in into C:\Windows\Fonts

Each Barcode type has 4 Height Settings: Short, Regular, Mid, Tall

Each of these in turn is then fully scalable as they are normal Windows Truetype fonts.

Sample EAN 13 HR

The regular size at 12 Point is ½ inch.

Do not use formatting tools to scale the barcodes horizontally, they may stop working!

The Fonts come with an HR option (Human Readable) this is the Alphanumeric string below the barcode to be read by Humans!

The Font used by all methods of encoding need to be the correct ones.
i.e. Encoded data must be used with the right font.

The Font name is show in the barcode utility.

The font name is shown in a Windows Font display box such as in Office.

Ensure there is no Space at the end of the font name!

Take a look at the fonts via Control panel\Fonts in the normal way.

Fonts can be embedded in documents with systems that use Font Embedding.

If Barcode Singles is updated, Software and font Version Control is used, including from the Demo version.

About Fontware

Formed in 1987, Fontware Ltd is a UK based Company supplying innovative corporate solution.
Our world-class software & hardware products are used each day by thousands of customers in over 50 different countries.
