

Barcode Singles 1D

Version 5.x

1D Barcode Font Kits - PC Format

Important Note:

Barcode fonts can not be used to simply apply to a string of data characters/digits.
The Result may look like a barcode, but it will NOT work, and NOT scan!

Office Support

Office 2003 – 20013

As Ribbon Bar (or command Bar for 2003)

Word & Excel

Once installed this program allows you to create and encoded barcode strings, displays the barcodes, and places in the “cut & paste” buffer, or applies barcode to selected strings or cells

The add-in will appear in Word and Excel in the same way.

The Ribbon bar will allow users to Insert a barcode

By filling in the options in the ribbon bar,

Barcode Type, Options, height, Point size, etc

Typing in the barcode string in Data to Encode

Selecting “Insert Barcode”

The Barcode will be inserted at the current Cursor location

Or, to apply the current barcode settings to a String that is already in the document and highlighted then use the “Quick Encode” option

The String will be turned into a barcode

It will use the current settings already set in the Ribbon Bar.

Barcode type selector

The barcode that display will only be the ones that have been installed

Available options / presets

These options will display differing options depending on barcode type

Certain options will be available to select, or will force mandatory pre-selects

Data to Encode

This is your barcode data string, digits or alphanumeric, depending on Barcode type.

The window will show if input format errors have been entered.

Height Options

Options to change to 1 of the 4 different height options, (at the same width)
¼ ½ ¾ and 1 Inch available when set at 12 Point.

Point Size

Allows scaling by Point size, in both horizontal and vertical settings

Word

Strings of data can be, Pasted in, selected and converted, or changed to barcodes "In line"

Excel

Strings of data can be, Pasted in, selected in a cell or Multiple Cells and converted, or changed to barcodes "In line"

Using Functions in Excel required the .XLL functions add-in to be installed.
The Ribbon Bar for Word and Excel is managed in the Com Add-in Section
Barcode utility must be enabled (as default per install)

The add-ins will and must show in the Active Add-in section.

Access

If using Microsoft Access, the best method is to use the .DLL,
It would be normal to Write a script or a use VBA to call the functions from a form
please see relevant documentation for function calls.
